TECHNICAL PROJECTS

City Info — *HTML • CSS • Javascript • Rails API • React • Redux*
Using APIs users can get information on weather, restaurants and upcoming events for the city of their choice. Developed front end with React and styled with CSS to enhance user experience. Managed application state using Redux middleware.

PaddySnake — *HTML ● CSS ● Javascript ● Rails API*
Using Javascript, created a game similar to the old cell phone game Snake. Keep your snake alive as long as possible while growing bigger by eating the magic apples. Used a Rails backend to keep track of users and high scores.

Novel Ideas —*HTML ● CSS ● Javascript ● Rails*
Users can search for books, add them to their personal bookshelves, leave reviews and discuss them in a forum as well as have access to top books and summaries. Built backend using Rails via MVC and object-oriented design paradigms.

Recipe Revamp — *HTML ● CSS ● Javascript ● Sinatra*
Using a web scraper, a user can search for and save recipes. Users can create recipes of their own and edit any existing recipe they have. Developed backend using Sinatra as a lightweight way to handle HTTP requests and ERB to render templates. Used Active Record to create and maintain data persistence.
